## Temperaturen der Satellitenmessungen der unteren Troposphäre

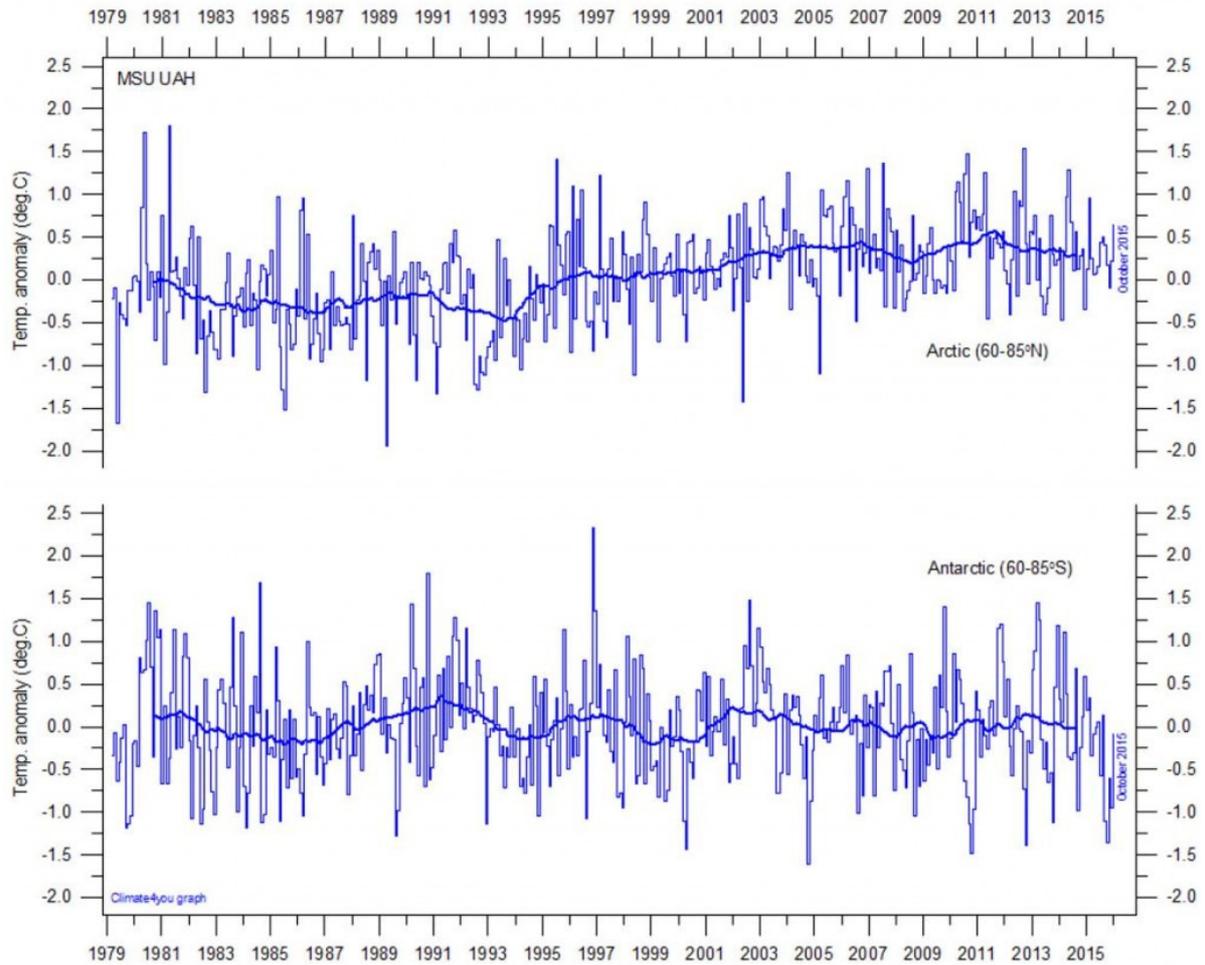

### a) Remote Sensing System bis Dezember 2015

### b) University of Alabama Huntington, UAH, bis Dezember 2015

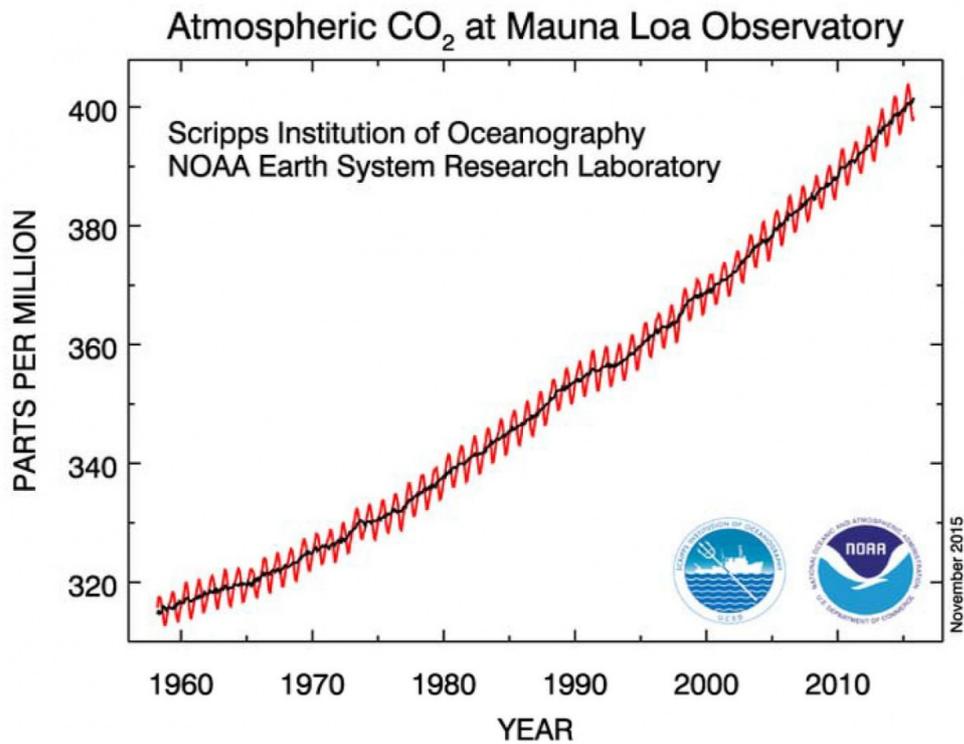

**c) Temperaturen Arktis (60-85° Nord) und Antarktis (60-85° Süd)  
Satellitenmessungen in der unteren Troposphäre bis Oktober 2015, UAH**

Global monthly average lower troposphere temperature since 1979 for the North Pole and South Pole regions, based on satellite observations ([University of Alabama](http://www.ua.hawaii.edu) at Huntsville, USA). Thin lines show the monthly temperature. The thick line is the simple running 37-month average, nearly corresponding to a running 3 year average. Reference period 1981-2010.
